Aleksandar Bulajic

Full-stack Software Engineer
NYC | (929)254-9356 | **aleks.bulajic25@gmail.com** | **Portfolio** | **LinkedIn** | **Github**

SKILLS

Front-end: HTML, CSS, JavaScript, React
Back-End: Node.js/Express, Python/Django, MongoDB, SQL(Postgresql)
Other: Git, GitHub, Docker, Solidity(Web3)

RELEVANT EXPERIENCE

Software Engineering Apprentice | General Assembly | New York, NY | April 2023 - July 2023
Successfully completed 480+ hours of expert-led instruction in Full-stack software development through hands-on learning of JavaScript and Python fundamentals. Projects include:

- **IdentityLock:** As a lead, my team and I created IdentityLock, an innovative app utilizing Ethereum NFTs to create unique identities on the blockchain, using React.js for the front-end interactions. The back-end is handled by a Django REST framework, with a Postgresql database. Experience the future of digital identity **here**!

- **MangaVerse:** MangaVerse allows for users to easily look up their favorite mangas, and read them. If the user wants to track a manga, they can also add them to their favorites.In this team project, I played a pivotal role in setting up the authentication/ authorization scheme for the front and back-end using React.js and MongoDB and JWT(JSON Web Token). As a result, we were able to achieve full CRUD functionality on both the front and back-end, ensuring a robust and user-friendly application. Dive into MangaVerse **here**.

- **NoPayToPlay:** I built an application that uses a 3rd party API with full crud in front and back-end. Designed and implemented a user-friendly interface using front-end technologies such as: HTML, CSS, JavaScript, enabling seamless interaction with the API. My first time developing a secure and efficient back-end with endpoints that handle data manipulation and technologies used were: MongoDB, JavaScript, Express, Mongoose. Gamers, check it out **here**.

EXPERIENCE

General Manager | Bar 135 | New York | April 2022–April 2023

- Built the whole placing orders, service style, POS management system from the ground up
- Created a full cocktail menu based on the customers' needs and the inventory that we had, carefully selecting and crafting a diverse range of delicious cocktails to cater to their preferences and ensure an unforgettable drinking experience.
- Recruited, hired, and trained a skilled team of bartenders, servers, and support staff, ensuring a high level of service and customer satisfaction.

Manager | Felice83 | New York | January 2020 – August 2021

- Managed 15+ servers and bartenders each shift
- Hosting and accommodating VIP guests
- Solving problems during service

Bartender | Felice64 | New York | June 2019 – January 2020

EDUCATION

General Assembly | Software Engineer Immersive | New York, NY
BMCC | Business Administration | New York
